Saner CVEM

Endpoint Controls Management

In today's digital landscape, most businesses operate with a growing number of globally distributed endpoints. These endpoints are always the first targets for attackers due to factors such as easy access, inadequate security measures, inconsistent monitoring, and difficulty in detecting malicious activities.

Effectively managing and automating various endpoint tasks—such as software deployment, endpoint updates, troubleshooting, and integration—can significantly lower the total cost of ownership (TCO) by minimizing time and effort while enhancing reliability and security.

Optimize Endpoint Security for a Safer Enterprise

SecPod Saner CVEM Endpoint Controls Management provides an efficient, automated, and advanced solution for managing all enterprise endpoints through a cloud-based single-pane-of-glass console. Saner CVEM automates routine end-to-end tasks with various built-in features, enabling you to achieve complete visibility, control, and seamless troubleshooting.

Saner CVEM Endpoint Control Management capabilities include monitoring a wide array of endpoint parameters, analyzing system health, remotely troubleshooting endpoint issues, performing remote software installations and uninstallations, blocking malicious applications or devices, and tracking and enforcing security controls, among other functionalities.
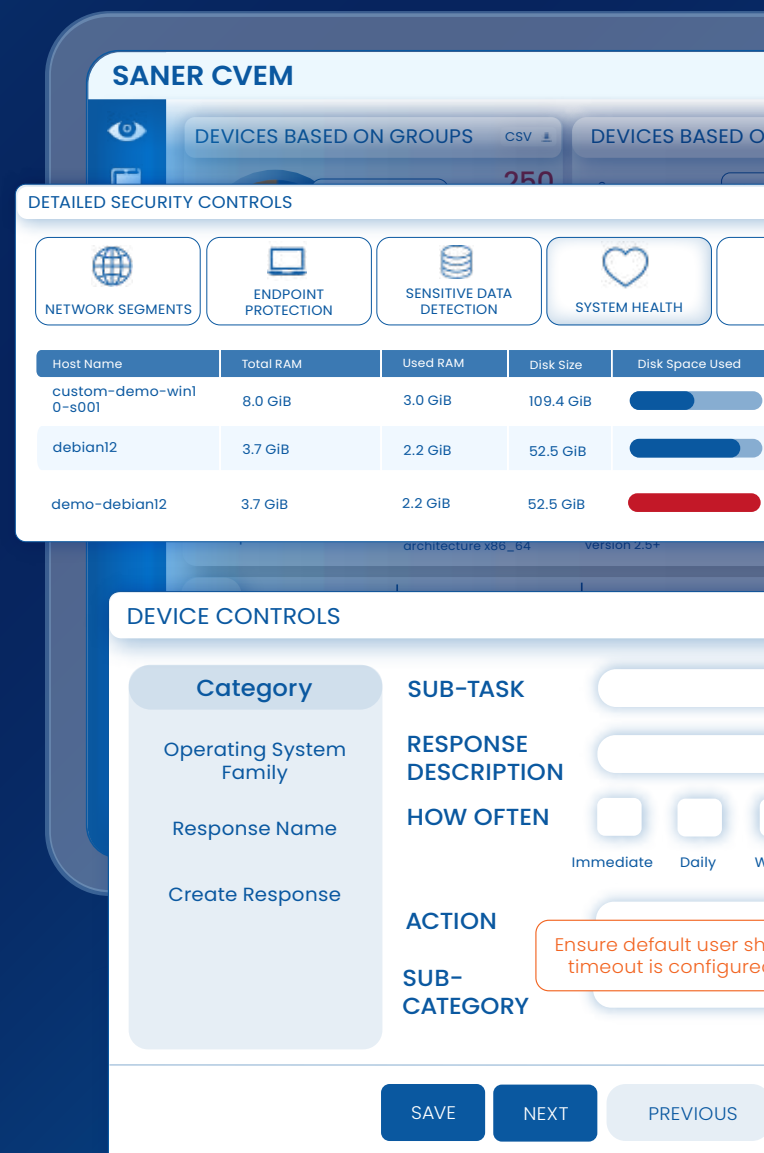

Achieve Seamless Endpoint Controls Management with Our Robust Capabilities

Deploy software from a pre-defined repository

Remotely schedule and deploy software across multiple computers using a pre-built software repository that includes hundreds of applications compatible with all major OSs. This powerful solution also supports customized software deployment with required installation details and silent switches

Instant Blocking of Malicious Applications

Saner CVEM enables you to block any unwanted applications within your network, effectively mitigating potential threats. By identifying and restricting rogue applications according to your enterprise's security policy, Saner CVEM ensures robust security and helps maintain a secure network environment.

Implement Robust Security Measures

Strengthen the security of your endpoints by implementing robust measures such as enabling firewall policies and conducting security checks. Quarantine or isolate devices and networks as needed, and perform sensitive data discovery to enhance protection.
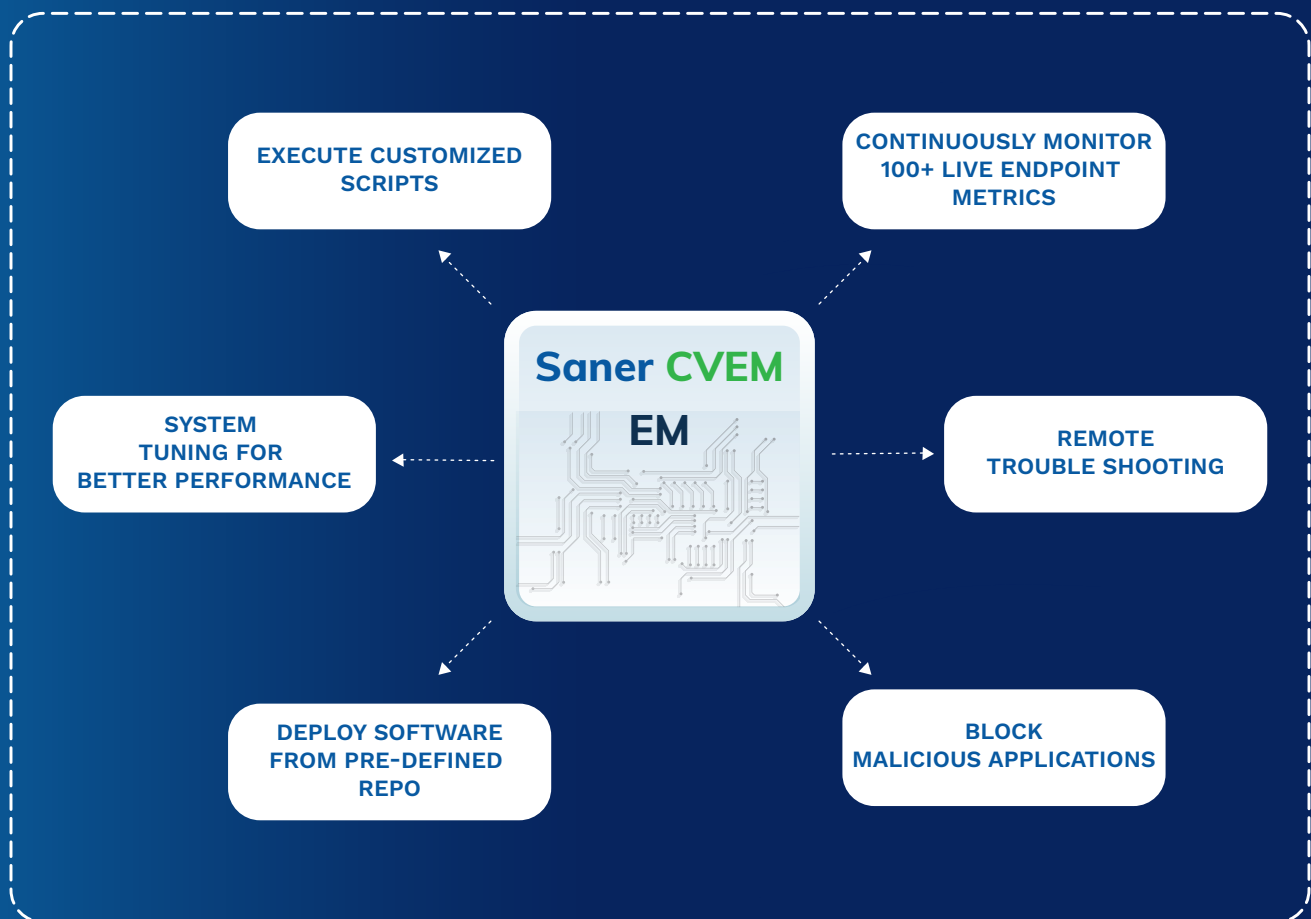

System Tuning for Enhanced Performance

Saner CVEM conducts regular audits and disk clean-ups, including the removal of unused or rarely accessed files. By cleaning up these unwanted files and optimizing costs through consistent maintenance and updates, you can effectively free up disk space and significantly enhance system performance.

Run Scripts on Remote Devices

Saner CVEM enables automating tasks by executing scripts remotely on IT devices. From its centralized console, you can run various scripts, including PowerShell, batch (bat), or shell scripts, to update, manage, or troubleshoot your remote computers efficiently.

Extensive Reporting and Audit Logs

Gain complete visibility into all endpoint details within your network through automated and scheduled reporting and audits. These reports, delivered directly to mailboxes, provide comprehensive insights and facilitate timely and effective implementation of security controls.

EXECUTE CUSTOMIZED SCRIPTS

CONTINUOUSLY MONITOR 100+ LIVE ENDPOINT METRICS

BLOCK MALICIOUS APPLICATIONS

Leverage the Benefits of Saner CVEM Endpoint Controls Management

Holistic Security Measures to Mitigate Risks Across Endpoints

Saner CVEM provides a variety of security controls to address deviations in security activities. It helps mitigate numerous risks in the network, including vulnerabilities, exposures, misconfigurations, IT asset exposures, security control deviations, and posture anomalies. These controls effectively manage the attack surface and protect the network from potential threats.

Secure your endpoint by blocking malicious activities

Saner CVEM allows you to identify and instantly block malicious applications and untrusted devices within your network, including USB and peripheral devices. By orchestrating various security controls, you can effectively reduce risk exposure and mitigate potential attacks.

Easy Management of Applications and Devices

Leverage over 100+ security controls with live monitoring of all the devices present in IT network. Saner CVEM supports all major OSs including windows, Linux and macOS

Enhanced Remote Access

Easily access, manage, and control unattended devices, servers, and other remote systems. With Saner CVEM's Remote Access, you can securely connect to these devices to troubleshoot issues, deploy scripts and patches, and maintain endpoints.
